

Lyle Paskowitz

This histogram shows forecasted gate revenues for 3000 trials of the NBA playoff simulation.

The full HTML plot is visible at http://rpubs.com/lyl_pask/gaterevenue.

The forecasted gate revenue closely follows the standard distribution/bell curve. The mean of this data is 235,614,248 with a standard deviation or uncertainty of 21,433,504.

Therefore, there is a 66% probability that the gate revenue will be in the range of **\$214,000,000-\$257,000,000**, with equal opportunity to fall below or above estimates.
